Hollow stainless steel rings, light version

Some situations (eg. a very large anchor point) require a longer cambium saver. It will be lengthened by tying it to another cambium saver with a girth hitch (as shown by illustration).

PERFORMANCES

The new range of JOKER LIGHT is the improvement of a classical range: several lengths and many loops make the products easy to adapt to any situation. They are lighter, thanks to new highly resistant rings and a thinner strap.

It comes in 3 versions, with many uses and combinations: a classical cambium saver with 2 carabiners, in association with a CHOKER JOKER LIGHT cambium saver (to lengthen it) for larger trunks, as a redirect, as a connecting strap, as a ground anchor for the 5 m with 1 ring etc.
